Education

McMaster University

Hamilton, ON

Bachelor of Engineering – Software Engineering. cGPA: **3.98/4.0**

September 2021 – April 2025

- **Achievements:** The McMaster University Award Of Excellence, Provost Honors Award and Dean's Honor List
- **Relevant Courses:** Data Structures and Algorithms and Introduction to Software Development

Technical Skills

Languages: JavaScript, TypeScript, Java, Python, HTML, CSS, Latex, Bash

Technologies: ReactJS, NodeJS, NextJS, TailwindCSS, Apache Maven, Flask, MongoDB, RESTful API, Google Firebase

Tools and Libraries: Git, GitHub, MS Office, UML, Photoshop

Experience

Workshops and Talks Member

September 2022 – April 2023

Google Developer Student Club

Hamilton, ON

- Collaborated with a team to create and present interactive workshops on emerging technologies, including machine learning, and artificial intelligence, to over 50 attendees per session
- Researched and analyzed emerging technological trends to ensure workshop content was relevant to attendees, resulting in a 90% satisfaction rate among participants in post-workshop surveys

Computer Technician Assistant

September 2019 – January 2020

Rama Tech Centre

Mississauga, ON

- Assisted in the installation, configuration, and maintenance of computer operating systems, hardware, and software packages, demonstrating a strong foundation in system administration and troubleshooting.
- Developed strong communication skills, effectively explaining technical issues and solutions to clients with varying levels of technical knowledge, resulting in increased customer satisfaction

Projects

Island Generator | Java, JUnit, Apache Maven, Apache CLI, JTS Library |

- Collaborated in a team of three to develop a software application for a client that generates and visualizes 2D island meshes
- Followed an iterative and incremental approach to development while adhering to SOLID principles and design patterns to ensure maintainable and extensible code
- Integrated JUnit and testing into the DevOps workflow, ensuring that the software application meets the quality requirements during the development and deployment process
- Used the Apache CLI to allow users to configure island properties such as elevation, lakes, and cities

Expense Tracker | Typescript, JavaScript, ReactJS, Mantine UI, Vite JS |

- Developed a front-end expense tracker web application using TypeScript and ReactJS that utilizes the web browser's local storage to store user data
- Integrated the Mantine UI to create a sleek and user-friendly interface that offers both light and dark mode options, enhancing user experience and accommodating personal preferences for visual aesthetics
- Visualized user budget and expenses in a pie chart using HTML Canvas API enabling users to visualize their spending's and make informed financial decisions
- Developed a category management system that allows users to assign, create, edit, and delete categories for their expenses
- Implemented comprehensive error handling and validation for user inputs to ensure data accuracy and prevent unexpected errors

Piraten Kapern Board Game | Java, Apache Maven, Log4J |

- Developed a Piraten Kapern simulator using Java through an object-oriented, iterative and incremental approach
- Integrated Log4j into the game's code to log errors and warnings, to help identify and debug issues or bugs
- Used Git to manage source code changes and track the progress of the game's development
- Created a backlog to organize and timeline features and released new features onto GitHub regularly resulting in 70% increase in productivity compared to previous projects
